First UK Linux Essentials Train The Trainer

Demand for Linux Skills and an awareness of Open Source is on the increase. Schools are using Raspberry Pis (Linux based) to teach computing. Colleges and Universities need to prepare students for the demand from employers for Linux and Open Source.

How does academia teach Linux and Open Source to students?

[Birmingham City University's](#) (BCU) Faculty of Technology, Engineering & the Environment have the answer. They took the [LPI Linux Essentials](#) and adapted it to the UK's first Train The Trainer program specific to this Certification.

Read more about the [Linux Essentials Train The Trainer](#) at www.lpi-uk.co.uk or see a selection of [pictures from the event](#).

Sage Lal, NEScot

Sage Lal, Head of Computing at [NEScot](#) commented on the course "I believe that every Lecturer in the country should do LPI as it gives you knowledge across Networking, Command Line and Programming.

I think it is essential for all our students to understand how these technologies work. Open Source is something that I really believe can make a difference to SMEs and organisations.

What is important is not just qualifications but certifications."
